Business Requirements Document

Salesforce Client Touchpoint Object — Enhancement Specification

Drawbridge • Relationship Management • Version 1.0 • March 2026

---

1. Purpose & Background

Drawbridge Relationship Management is implementing a structured client engagement program requiring RMs to log 20 meaningful client interactions per week. The existing Salesforce Client Touchpoint object lacks the field-level detail needed to track contact quality, activity type, and outreach direction — data required for weekly RM reporting and board-level retention metrics.

This document specifies the field additions and picklist configurations required to support that program. No existing fields are being removed or renamed. All changes are additive.

---

2. Scope

- Object: Client Touchpoint (custom object)
- Requesting team: Relationship Management (VP: Chris DeLisle)
- Admin owner: [Salesforce Admin Name]
- Target go-live: [Date — recommend within 1 week of approval]
- Downstream dependencies: Weekly RM activity reports, Board retention dashboard (target: May 2026)

---

3. Problem Statement

The current touchpoint record captures account and date but does not capture:

- Which individual at the client was contacted
- Their seniority level (exec vs. influencer vs. coordinator)
- The channel used (call, email, meeting, visit)
- Whether the interaction was RM-initiated or client-initiated
- Whether a two-way conversation actually occurred

Without this data, RM activity cannot be audited for quality, contact depth cannot be measured at the board level, and Sturdy.ai email engagement data cannot be cross-validated against Salesforce logs.

---

4. Interaction Standard (Policy)

The following standard governs what qualifies as a loggable touchpoint. This standard is enforced through picklist design — the available options should reflect completed interactions only, not attempts.

4.1 Definition of a Qualifying Interaction

A touchpoint represents a completed, two-way interaction. Attempts do not qualify.

Activity Type	Qualifies When...	Does NOT Qualify
Call	A live conversation took place (RM spoke with the contact)	Voicemail left, no answer, call not returned
Email	The client replied to the RM's outreach (reply received)	Email sent with no reply; one-way communication
Meeting	A scheduled meeting occurred with the client contact present	Meeting declined, rescheduled, or no-show
Onsite Visit	RM was physically present at the client's office and met with a contact	Visit planned but cancelled or contact unavailable

4.2 Validation via Sturdy.ai

Sturdy.ai passively captures inbound and outbound email engagement by account. Email touchpoints logged in Salesforce will be spot-checked against Sturdy data weekly to validate that logged replies correspond to actual two-way email threads. Discrepancies will be flagged in the Friday RM rollup review.

---

5. Field Requirements

The following fields are to be added to the Client Touchpoint object. All fields marked Required must be completed before the record can be saved.

5.1 Activity Type

Attribute	Specification
Field Label	Activity Type
Field API Name	Activity_Type__c
Field Type	Picklist
Required	Yes
Default Value	None (blank)
Picklist Values	Call | Email | Meeting | Onsite Visit
Help Text	Select the channel used. Each option represents a completed interaction only. See RM Process Guide for qualifying criteria.
Placement	Key Information section, row below Status field

5.2 Client Contact Name

Attribute	Specification
Field Label	Client Contact Name
Field API Name	Client_Contact_Name__c
Field Type	Lookup (Contact object) — or Text(255) if Contact records are unreliable
Required	Yes
Help Text	The individual at the client firm you spoke with. If contact record does not exist, enter full name manually and create the contact record within 24 hours.
Placement	Key Information section, adjacent to Account field
Admin Note	Preferred implementation is a Lookup to Contact filtered by Account. If Contact data quality is insufficient to support a Lookup reliably, use Text(255) as interim approach and migrate to Lookup in a future release.

5.3 Contact Tier

Attribute	Specification
Field Label	Contact Tier
Field API Name	Contact_Tier__c
Field Type	Picklist
Required	Yes
Default Value	None (blank)
Picklist Values	Tier 1 — Executive | Tier 2 — Influencer | Tier 3 — Coordinator
Help Text	Tier 1: CFO, COO, CTO, CCO, Managing Partner, Principal. Tier 2: VP, Director, Senior Associate (budget-aware). Tier 3: All others.
Placement	Key Information section, below Client Contact Name

5.4 Outreach Direction

Attribute	Specification
Field Label	Outreach Direction
Field API Name	Outreach_Direction__c
Field Type	Picklist
Required	Yes
Default Value	None (blank)

Attribute	Specification
Picklist Values	RM-Initiated | Client-Initiated
Help Text	Who initiated this interaction? RM-Initiated means the RM reached out first. Client-Initiated means the client contacted us first.
Placement	Key Information section, below Contact Tier

5.5 Path to Executive (Conditional)

Attribute	Specification
Field Label	Path to Executive
Field API Name	Path_to_Executive__c
Field Type	Text Area (255)
Required	Conditionally required when Contact Tier = Tier 2 or Tier 3
Help Text	If this contact is not an executive, briefly describe the plan to reach the decision maker at this firm (e.g., 'Sarah will intro me to the CFO on next call').
Placement	Key Information section, below Outreach Direction
Admin Note	Conditional requirement can be enforced via Validation Rule: AND(OR(ISPICKVAL(Contact_Tier__c, 'Tier 2 — Influencer'), ISPICKVAL(Contact_Tier__c, 'Tier 3 — Coordinator')), ISBLANK(Path_to_Executive__c))

6. Reporting Requirements

The following Salesforce reports are required to support weekly RM activity tracking and board-level retention reporting. These should be built by the admin concurrent with field deployment.

Report Name	Filters	Key Fields	Audience
Weekly RM Activity Summary	Touchpoint Date = current week; grouped by Owner	Owner, Account, Activity Type, Contact Tier, Outreach Direction, Client Contact Name	Chris DeLisle (weekly review)
Contact Tier Distribution	Touchpoint Date = rolling 30 days; grouped by Owner + Contact Tier	Count of touchpoints by tier per RM	RM team + board reporting
Email Touch Validation	Activity Type = Email; Touchpoint Date = current week	Owner, Account, Client Contact Name, Date	Cross-reference vs. Sturdy.ai digest

Report Name	Filters	Key Fields	Audience
At-Risk Account Coverage	Accounts flagged renewal risk; last touchpoint > 14 days	Account, Owner, Days Since Last Touch, Contact Tier	Chris DeLisle (weekly review)

7. Validation Rules

Rule Name	Logic	Error Message
Require Path to Exec for Non-Exec Contacts	AND(OR(ISPICKVAL(Contact_Tier__c, 'Tier 2 — Influencer'), ISPICKVAL(Contact_Tier__c, 'Tier 3 — Coordinator')), ISBLANK(Path_to_Executive__c))	Please describe the path to an executive contact for this account.
Activity Type Required	ISBLANK(TEXT(Activity_Type__c))	Activity Type is required before saving a touchpoint.
Contact Tier Required	ISBLANK(TEXT(Contact_Tier__c))	Contact Tier is required. Select the seniority level of the person you spoke with.

8. Acceptance Criteria

- All four new fields appear on the Touchpoint layout in the Key Information section
- Activity Type, Contact Tier, and Outreach Direction are required fields — record cannot be saved without them
- Path to Executive is conditionally required when Contact Tier is Tier 2 or Tier 3
- Activity Type picklist contains exactly four values: Call, Email, Meeting, Onsite Visit
- Contact Tier picklist contains exactly three values as specified
- All four reports are created and accessible to Chris DeLisle and RM team members
- Admin has confirmed field API names match this spec for downstream reporting

9. Out of Scope

- Changes to existing fields (Status, NPS, Adoption Stage, etc.)
- Automation or workflow rules beyond the validation rules specified above
- Integration with Sturdy.ai (manual cross-reference process only at this time)
- Mobile layout optimization (desktop Salesforce only for initial release)

10. Approvals

Role	Name	Signature	Date
Requesting VP	Chris DeLisle		
Salesforce Admin			
CEO (if required)	Eric Bernstein
