CRA RESULTS INTAKE & INTERPRETATION SOP
(Relationship Management)

Purpose

This SOP defines the standard process for Relationship Management to:

1. Download Cyber Risk Assessment (CRA) results from the Drawbridge Admin platform
2. Upload and normalize results into the 2026 Fundamental Priorities Organizer
3. Interpret and explain results for clients in a consistent, defensible manner

This process supports client-facing discussions, internal quality control, and repeatability across the RMs.

Scope

Applies to all RMs handling CRA reviews where CRA results are stored in the Admin platform and tracked in the 2026 Fundamental Priorities Organizer spreadsheet.

Source Systems & Artifacts

• Drawbridge Admin Platform: CRA Questionnaire (full client assessment export)
• Spreadsheet: 2026 Fundamental Priorities Organizer (Export tab, Priorities tab, analysis columns)

Step 1: Download CRA Results from Admin Platform

Step 1A: Access the Drawbridge Admin Platform

1. Register for access to the Drawbridge Admin platform if you do not already have credentials.
2. Log into the Admin platform: https://admin.drawbridgeplatform.com/org-client
3. Confirm access to the top navigation, including the **DDQ** tab.

Step 1B: Locate the Client CRA

1. Select the **DDQ** tab from the top navigation.
2. Locate the DDQ sent to the organization.
3. Click the **hamburger (three-line) icon** next to the DDQ entry.
4. Type the client name to filter results.
5. Review the list of completed assessments for the client.

Step 1C: Select and Download the Correct CRA

1. Identify the most recent CRA based on the **Publish Date**. Ignore VRAs.
2. In the **Action** column, click **Download**.
3. Ensure you select **Download only**, as this is required to pull the full CRA questionnaire.
4. Save the downloaded file locally on your machine.

Step 2: Upload CRA Results into the Organizer

Step 2A: CRA Data Copy Procedure

1. Open the downloaded CRA export file.
2. Navigate to the **Risk DB_av** tab.
3. Select all data using **Control + A**.
4. Copy the full dataset.
5. Open the **2026 Fundamental Priorities Organizer**.
6. Navigate to the **Export** tab.
7. Paste the copied data into the Export tab, replacing any existing content.

Step 3: Review Results in the Priorities Tab

1. Navigate to the **Priorities** tab in the Organizer.
2. Allow formulas and conditional formatting to fully refresh.
3. Confirm risks, colors, and overlays populate as expected.

Step 4: Risk Color Interpretation (Column C)

Column C reflects Drawbridge's assessment of risk based on control implementation.

Color Legend:
• Black: No Risk (control is fully in place)
• Yellow: Low Risk
• Orange: Moderate Risk
• Red: High Risk

Interpretation Guidance:
• Prioritize Red and Orange items for remediation discussions.
• Yellow items typically represent improvement opportunities, not urgent failures.
• Black items require no action unless scope or environment has materially changed.

Step 5: SEC Relevance Interpretation (Column E)

Column E maps CRA findings to SEC cybersecurity guidance.

Color Legend:
• Black: Risk is not related to SEC guidance
• White: Control is recommended by the SEC and is appropriately implemented
• Yellow: Control is recommended by the SEC but not implemented; more than 50% of Drawbridge clients also do not implement this control
• Orange: Control is recommended by the SEC but not implemented; 33%–50% of clients also do not implement this control
• Red: Control is recommended by the SEC but not implemented; fewer than 33% of clients also do not implement this control

Accuracy Note:
• Column E is benchmark-based and dynamic.
• Red/Orange/Yellow values change as client population data changes.
• The spreadsheet reflects a point-in-time view accurate as of mid-March 2026.
• SEC colors should not be framed as static or absolute compliance determinations.

Step 6: PE Services Overlay (Column F)

Column F identifies controls the client pays Drawbridge to perform.

Behavior:
• If a client has a risk but pays Drawbridge to manage, the cell in Column C will display in **blue**.

How to Interpret Blue:
• New clients: Contracted work that has not yet been completed.
• Existing clients: Potential data discrepancy (e.g., client indicates no training, but DB delivers training).

RM Responsibility:
• Validate discrepancies internally before raising them with the client.
• Do not present discrepancies as client failures without confirmation.

Step 7: Client Interpretation & Discussion

When reviewing CRA results with clients:
• Lead with prioritization and business impact, not raw color counts.
• Separate regulatory relevance (Column E) from operational risk (Column C).
• Explicitly identify which risks Drawbridge is already engaged to manage.
• Clearly distinguish between:
– Risks requiring client action
– Risks pending Drawbridge delivery
– Risks that are benchmark-common or accepted

Common Pitfalls to Avoid

• Treating SEC color indicators as static compliance judgments
• Presenting benchmark-based findings as regulatory violations
• Failing to reconcile Column F prior to client discussions
• Downloading partial CRA data instead of the full questionnaire

Outputs

• Updated 2026 Fundamental Priorities Organizer
• Client-ready interpretation of CRA results
• Clear internal record of risks, services, and ownership

Additional Context: How to Interpret the Spreadsheet (Required Reading)

The spreadsheet is a **prioritization and conversation tool**, not a compliance scorecard.

How the Columns Work Together:
• Column C answers: How serious is this risk for this client right now?
• Column E answers: How much regulatory relevance does this risk have and is it across our client base?
• Column F answers: Who owns remediation: the client, Drawbridge, or both?

Interpretation Patterns:
• Red (C) + Red/Orange (E): High priority with regulatory relevance.
• Red (C) + Yellow (E): Real risk, but common; frame as a maturity gap, not a compliance failure.
• Blue (C): Drawbridge is already contracted to manage this control; discuss delivery status or validation.
• Yellow/Orange (C) + Black (E): Operational hygiene issue, not SEC-driven; address pragmatically.

What This Sheet Is Meant to Drive:
• Remediation sequencing and prioritization
• Clear ownership of next actions
• Informed, non-alarmist client conversations
• Alignment between CRA findings and paid services

What This Sheet Is Not Meant to Do:
• Declare compliance or non-compliance
• Rank clients against one another
• Replace professional judgment or advisory context
